

A cable gland with a nut with a PG thread fastening type is an essential element for safe and efficient cable routing in various applications. Polyamide (PA) provides excellent resistance to mechanical stress, chemicals and temperature fluctuations.

The gland ensures a firm and tight fit of the cables, which minimizes the risk of damage and increases the reliability of the entire system.

Thanks to the PG thread, installation is quick and easy. Ideal for use in industrial, electrical and electronic installations, where the emphasis is on long service life and safety.
