

Čelistové spony Robust se používají pro velmi namáhané spoje či odolné hadice. Zahnuté hrany pásku znemožňují poškození hadice.

Příměs molybdenu způsobuje odolnost oceli proti kyslíku, dokonce i v oblasti sváru. Materiál spony je odolný proti působení všech druhů solných, organických a anorganických kyselin. Používá se na místech s maximálními nároky na odolnost proti korozi.

- **Materiál:** chromniklová molybdenová ocel
